

OsteoCentric® Technologies

Headless Compression System

Discover Unparalleled Stability via Integrated Fixation

- Proprietary self-tapping technology preserves the structural integrity of the bone while creating both a pristine and stable pathway for implant insertion.
- Differential thread pitch between tip and rear of the fastener creates compression across the fracture when inserted.
- Cylindrical nature allows for enhanced compression as well as interoperative flexibility during implant placement and adjustment.

OsteoCentric®
TECHNOLOGIES

UnifiMI™
An OsteoCentric
Technology

Mechanical Integration (MI) is a minimally invasive method to instantly secure and stabilize implants to the patient's bone utilizing a proprietary bone preservation technology and unique interlocking thread geometry.

OsteoCentric Fasteners are designed to create a new standard for primary implant stability and expedite robust long-term stability for implants utilizing Osseointegration (OI). UnifiMI, the first Mechanical Integration technology, addresses the problems caused by implant instability.

2.8mm Micro Screw Fasteners

Part Numbers

801-22812-30

Length

12-30mm, 2 mm increments

3.9mm Mini Screw Fasteners

Part Numbers

801-23916-34

801-23940-50

Length

16-34mm, 2 mm increments

40-50mm, 5 mm increments
