

Introducing The Integrity-SI™ System

Now by **OsteoCentric** Technologies

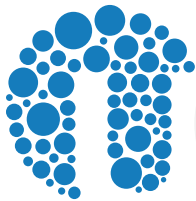

OsteoCentric Technologies is proud to announce the acquisition of the Integrity-SI System.

OsteoCentric's **UnifiMI** technology is the perfect complement to the Integrity SI Fusion System, providing improved load sharing and stability to an already proven, minimally invasive, single or dual implant SI fusion approach. The coupling of these two innovative technologies make the Integrity SI fusion system the ideal solution for both primary and revision SI joint fusion surgeries. The addition of UnifiMI into the Integrity system will enhance the already robust fusion masses and durable clinical outcomes in all patients irregardless of bone density.

By applying UnifiMI to the Integrity-SI fusion system, we can combine the instantaneous and lasting multi-axial stability that comes with UnifiMI's mechanical-bone integration with the only SI fusion system on the market that truly utilizes the proven principles of joint fusion: aggressive joint preparation, autologous bone grafting, and industry-leading joint compression.

Now Featuring:

UnifiMI

An **OsteoCentric**
Technology

Primary SI fusion system, and the best revision system out there.

Works with all bone qualities given that we recommend bypassing sacral ala.

The technologies are 'synergistic' in that each promote the goals of fusion: Mechanical Integration and stability with thread redesign and stability of compression imparted.

UnifiMI
An **OsteoCentric**
Technology
